

IceApple Website - Code Review

Critical Issues

1. Root layout calls cn as a tagged template (src/app/layout.tsx:82) causing runtime failure.
2. API routes crash on import when SendGrid env vars are missing; move setup inside handlers.
3. Resume download endpoint allows path traversal and forces PDF content-type regardless of file
4. Career upload discards original filenames, breaking attachment types and download metadata.

Quality Gaps

- Layout logic leans on useDeviceType, causing hydration mismatch and layout shifts.
- Navigation menu drops navigationMenuTriggerStyle(), losing built-in interaction styles.
- Enquiry form posts JSON without Content-Type, lacks loading state, and hides API errors.
- Hero and map images ship with empty alt text, hurting accessibility.

Maintainability

- Long relative imports ignore configured @ alias and increase churn.
- Blogs page reads XML synchronously and logs to console on every request.
- TypeScript allows JS and skips lib checks, masking typing problems.
- No automated tests to cover forms or uploads, so regressions slip through.
